Unleash the Power of Personalized AI with Botlit

Create Intelligent, Custom Bots Backed by Agentic AI—Effortlessly and Securely

In a world overflowing with information, harnessing it effectively is the key to unlocking **unparalleled opportunities.** Botlit empowers you to create intelligent bots that are not just AI-powered but are trained on your very own knowledge base—from **any source, of any type**. Imagine a bot that understands your business inside and out, communicates seamlessly across platforms, and automates tasks effortlessly.

Why Us?

Flexible LLM integrations
Incorporate the right model for your use case. Be it GPT 4.0, 4o, LLAMA 3.1, Mistral, etc. or even a mix of models

End-End RAG Pipeline
Make use of the knowledgebase you have in house to augment the LLM's knowledge and derive useful insights from the data you already have.

Data Privacy & Localization
We make sure that all your data stays within your servers (unless you want access to third party LLMs) and does not leave traces outside with our comprehensive private cloud deployments

Multiple Data Sources & Types
Whether you want the data source to be a document, website, whatsapp conversation, in house database, third party APIs or source code, we will work with it to get the data intelligence you need for your use case.

Cloud Native Deployments
We understand the importance your infrastructure plays in the performance of the model. We adopt a GPU first cloud native environment for your deployments and get the models optimized for scale and performance.

Why Us?

Interactive UI & Dashboard
We understand how important it is to have a system with clean UI/UX. We offer a clean UI and comprehensive dashboards to analyze how the system is behaving and how the users are interacting with it.

Multi tenant, Multi user, Multi bot support
Have multiple departments or business units? Our system caters to your growing needs and you can partition it the way you want and have the data clearly segregated as well

Copilot support
Want to have the bot embedded in your website? Sure. You can do that as well and have actions executed on the website as per your needs.

Guardrails
Keep your large language model in check and make sure that any profanity, toxicity and unwanted language is filtered out before responding back to you

Caching support
Optimize costs and performance of the system with the caching support we provide out of the box so that repetitive questions need not be processed again unless really required
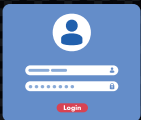

Why Us?

Cloud Bucket Sync
Have your own cloud storage buckets in AWS, Azure of Google Cloud? We can sync your documents and get started from there.

Public & Private Bots
You may choose to expose the bot to the public (without logins) or to your internal workforce/userbase (with logins) and the bot will still work great.

Configuration at the core
At the core, every parameter is configurable with sensible defaults. You can fiddle with the model, temperature, RAG pipeline, phases of RAG, bot name, logo, and more without relying on us.

Chain of Thought
When the bot works to answer your queries, you can get an essence of what the bot is really doing behind the scenes to give you the answer with relevant extracts ensuring transparency

Cross Platform & Responsive
The bot is cross platform and responsive - it will give you a seamless experience whether you are using it in a mobile, desktop or the web allowing you to do what you really need.
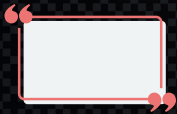

Why Us?

Conversation history & resume
If you are logged in, we save the conversation history for you and you may choose to browse through it and resume where you left off at any point of time picking up the same context

Support for citations
When we give you a response, we also do give you the source from which we picked such information be it a webpage, document or conversation allowing you to see all the relevant context

Ranked by relevance
Get the results ranked in the order of relevance without browsing through everything

Multi-lingual
We understand and support multiple languages and respond back to you with the language of your choice

Multi-modal
We support conversations that go beyond text, allowing users to interact through images, voice, and other formats.

Multi-channel
Connect and converse anytime through popular platforms like MS Teams, Slack, Discord, and more.

Be a Part of the AI Revolution

Botlit is more than a product; it's a **paradigm shift** in how you interact with technology. Whether you're a business looking to enhance customer engagement, an educator aiming to personalize learning, or an innovator dreaming big—**Botlit is your canvas.**
